# ENVIROSHIELD® MAX

Take on the hot and humid summers without losing your cool!

## Energy Savings

Save hundreds to thousands of dollars a year on monthly energy bills.

## Increased Comfort

Stop fighting with air control fluctuations by maintaining a consistent and comfortable temperature.

## Protection for the Inside of Your House

Cut out 95% of detrimental UV rays that cause fading, while keeping the view and visible light transmittance.

## Quality Options

Available with Traditions SDL or GIA.

## Reduced SHGC

EnviroShield Max reduces the Solar Heat Gain Coefficient by at least 64% compared to ordinary windows, and over 30% when compared with our standard EnviroShield Plus system.

## Keep the View

No shade, tint or color distortion so the view is kept pristine.

## Decreased HVAC Load

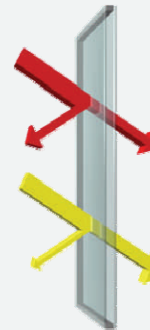

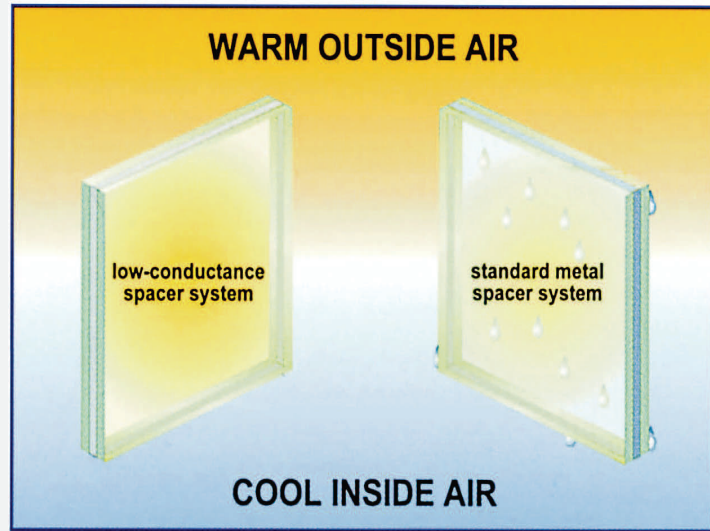

Due to the increase in energy efficiency, there are lower peak air conditioning needs that allow for smaller HVAC tonnage.

*Traditions*  
Simulated Divided Lite System

1/4" High

SHGC = .22  
22% of Solar Heat is transmitted and gained through window

VT = .52  
52% of visible light is transmitted through window

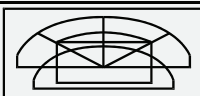

A lower Solar Heat Gain Coefficient translates into less heat that is transferred into the house through that particular window by radiation from the sun.

The higher the visible transmittance, the more visible light can be seen through the window.

A good balance between these ratings is the key for a quality window in the Gulf Coast Region that will save you money and your view.
