WHAT IS HIGH PERFORMANCE GLASS?

The insulated glass in all products from The Showcase™ Window and Door Company provides long-term value and exceptional thermal performance. Our low-emissivity glass coatings give you four distinct advantages: 1) High Visibility, 2) Solar Control, 3) Energy Savings, and 4) Year-Round Comfort. Our insulated glass is manufactured by Cardinal Glass, one of the premier manufacturers in the industry. Cardinal specializes in low emissivity coatings which produce superior glass for energy-efficient buildings.

Quality Windows and Patio Doors from Showcase

At the Showcase Window and Door Company, we use high-performance glass and durable, fusion-welded frames in our products. Our windows and doors are designed for the weather conditions in Texas, Louisiana, Mississippi and the Gulf Coast region.

Laminated Glass Technology

Our laminated glass options consist of annealed, heat-strengthened or tempered glass with one or more transparent, high-strength interlayers. We offer advanced LoĒ coatings and warm edge technology, and there's no need for glass tints.

LoĒ3-366 Glass with Argon Gas Filling

This glass delivers the ideal balance of solar control and visual clarity. It provides the highest levels of year-round comfort and energy savings. The secret? A remarkable triple layer of silver for thermal protection. Additionally, a clear coating blocks more solar heat gain than ever before.

LoĒ3-340 Glass with Argon Gas Filling

The solar performance of our LoĒ3-340 glass is exceptional. This double-pane glass reduces oppressive solar heat gain and glare. In cold weather the low U-factor reduces indoor heat loss. The result is year-round comfort.

LoĒ2-270 Glass with Argon Gas Filling

This glass is a great choice for all-season comfort. It reduces solar heat gain by 50% when compared to ordinary glass. LoĒ2-270 glass also allows light in to warm your home during cooler winter months.

Hurricane Impact Glass

The people at the Showcase Window and Door Company live and work in the Gulf Coast region. We know how to build windows and patio doors that stand up to weather extremes! Our Impact Windows are approved by the Texas Department of Insurance (TDI) for new construction and replacement uses.

Obscure Glass Distorts View from Outside

For bathrooms and private areas

Satin Pattern

Protection from Break-Ins

Blows from hard objects can cause breakage. Our PVC interlayer keeps glass together and within the frame. Meets ASTM F-1223 (Class 1) Forced Entry Standards.

Shielding from UV Rays

The laminated insulating glass in our 143 Series helps protect fabric, furniture and other interior items. While most UV rays are blocked, light can still shine in.

Reduced Sound Transmission

Acoustic studies show reductions of up to 50% in the transmission of outside noise, compared to ordinary glass. This makes for a more peaceful and restful home, regardless of location.

Resistance to Flying Debris

Missile testing shows our windows resist repeated blows by a 9 lb.10 ft, 2x4 beam traveling 34 mph. They withstand pressures up to DP-80. We meet CPSC, CFR 1201 and ANSI Z97.1 safety glazing standards.

ENERGY STAR® Rated

Showcase 143 Windows meet or exceed ENERGY STAR standards. They reduce solar heat gain and heating and cooling costs. Over time, cost savings can be significant.
